

SECURE YOUR DOCKER CONTAINERS

HORUS SCANNER CONTAINER

Brochure

About

Horus Scanner is a comprehensive security scanning tool widely used in DevOps environments to identify vulnerabilities and other security issues. It is renowned for its speed, ease of use, and the fact that it does not require a complex database for maintenance.

Containerization

Containerization is one of the primary global software development trends. The technology allows to accelerate the app design and delivery process. However, traditional security solutions aren't suitable for the architectural features of containerized environments.

Horus Scanner Overview

Horus Scanner is a comprehensive security scanning tool widely used in DevOps environments to identify vulnerabilities and other security issues. It is renowned for its speed, ease of use, and the fact that it does not require a complex database for maintenance.

Key features

Container Images

This is the most common use case, detecting vulnerabilities in operating system packages and application dependencies.

Infrastructure as Code (IaC)

Detects misconfigurations in configuration files such as Terraform, CloudFormation, Kubernetes manifests, and Dockerfiles.

Secrets Detection

Searches for exposed passwords, API keys, and leaked sensitive information within source code or container images.

Filesystems and Git

Repositories

Scans local files, directories, or remote Git repositories to identify security issues.

Kubernetes and Cloud

Deployments

Scans for security risks within Kubernetes environments and cloud services.

Horus Container architecture

Benefits

Simple and Lightweight

Easily installed as a single binary file, requiring no complex configuration or external databases.

Comprehensive Scanning

Utilizes vulnerability databases from various sources (such as NVD, Alpine SecDB, and Red Hat Security Data) to ensure broad coverage.

Easy Integration

Can be seamlessly integrated into Continuous Integration/Continuous Deployment (CI/CD) pipelines to automate security checks.
